

# More DAN Courses

Medical Oxygen Rebreather

Oxygen First Aid for Aquatic Emergencies

First Aid for Hazardous Marine Life Injuries

**New!**

## Dive Medicine for Divers

A modular programme that provides a better understanding of diving, physiology and issues of dive safety.

## Diver Medical Technician (DMT)

DMTs will be trained to give advanced First Aid (chest drainage, stitches, etc.) and to assist in the hyperbaric chamber under the supervision of a medical professional.

Pierre-Yves Cousteau - **President of Cousteau Divers**

*"Cousteau Divers uses DAN Europe safety standards for their reliability and validity, to select Cousteau Divers centres all over the world."*

### Basic Life Support

Designed for anyone wishing to learn BLS techniques, such as airway management, recovery position, cardiopulmonary resuscitation, as well as additional skills to use in the case of choking, haemorrhage, and shock.

### Automated External Defibrillation

Learn to provide aid in the case of sudden cardiac arrest, including the use of an Automated External Defibrillator (AED). A course for everyone.

### First Aid

Understand the fundamental techniques of First Aid. This course teaches you how to make illness and injury assessments, bandaging techniques, splinting, and other emergency procedures. Geared toward anyone who wants to be able to provide assistance in the case of necessity.

## Why choose DAN Courses?

- Courses are developed by a team of Medical and Educational Specialists.
- Each specialised course teaches a specific area of First Aid.
- The techniques and skills are varied and designed specifically for each course.
- Courses give the amount of time necessary for the instruction of theory and, especially, practical skills.
- Courses are recognised internationally and adopted by academic bodies, law enforcement, rescue teams, and healthcare professionals.

### Oxygen First Aid for Scuba Diving Injuries

Learn to identify diving accidents, and be able to provide emergency first aid, specifically with the administration of oxygen. Students of this course are able to obtain the qualification of "DAN Oxygen Provider."

### On-Site Neurological Assessment for Divers

Learn how to conduct a neurological assessment, necessary to help evaluate a potentially injured diver. The information gained in this assessment can help convince a diver of the need for oxygen first aid, and help a dive physician determine the proper treatment.

### Advanced Oxygen First Aid

An advanced level course that trains existing DAN Oxygen Providers to provide care for a non-breathing injured diver using the MTV-100 resuscitation valve and the Bag Valve Mask.
